

DBAM Environmental Policy Statement

Background

The Board of DBAM Systems Limited recognises the importance of global environmental protection. It is committed to meeting this challenge and continues its work on the progressive reduction of the impact of its business activities on the environment.

DBAM's environmental policy is reproduced below.

Policy Statement

Our knowledge and our solutions are helping to create a world that needs fewer resources in the provision of increasingly flexible communications and faster data transfer. DBAM's staff members passionately believe that this creates a better world for the current generation and for future generations of people.

Statement of Principles

We have a responsibility to the wider community and we are committed to environmental protection.

This means DBAM will:

- Ensure sustainable development in environmental protection by careful use of natural resources. It is our aim to avoid pollution or to reduce it to a minimum, above and beyond statutory requirements;
- Work continually towards reducing the burden on the environment, toward minimising associated risks and toward lowering the use of energy and resources, above and beyond the legal requirements;
- Take appropriate precautions to avoid environmental hazards and to prevent damage to the environment;
- Assess and incorporate the potential impact on the environment in product and process planning at the earliest possible stage;
- Ensure that our environmental policy is implemented effectively by applying appropriate management systems. The technical and organisational procedures required to do this are monitored regularly and constantly developed;
- Require each employee to act in an environmentally conscious manner. It is the constant duty of our management to increase and encourage awareness of responsibility at all levels
- Work with our business partners to promote conformity with similar objectives and work in a spirit of co-operation with the relevant authorities;
- Inform the public of the impact on the environment caused by the company and our activities related to the environment. We supply our customers with information on ways to minimise any potentially adverse environmental impacts of our products.

Implementation

To enable good management practices to be developed and maintained, the company administers the above policy through the employment of our Quality Management System.

Visibility

The Environmental Policy is made available and displayed on company sites, including main reception areas. An electronic copy of the Policy is also included within the company's Internet pages.

Information relating to company policy and objectives is made available to actual and potential customers and suppliers where appropriate.

The directors of DBAM give their full support to the implementation of these principles.
